

Job Summary:

Ad Platforms organization within Disney Entertainment and ESPN Technology is fully responsible for building, enhancing and maintaining the high-performance, distributed, microservice-based Advertising Platform across all of Disney online properties, including Hulu and ESPN+. We build and maintain proprietary technology, ranging from ad serving and ad delivery, campaign management, reporting as well as all the integrations internal and external that come with evolving and maintaining a best-in-class video advertising business.

As a P3X (Senior Software Engineer 2) of our team, you will apply your knowledge and skills to help us deliver scalable, performant, maintainable, and testable software.

Daily, you should bring:

- A willingness and desire to effectively communicate and collaborate across teams and systems.
- An understanding of the importance of project ownership.
- A passion for mentoring, learning, and adapting to a very dynamic and fast-paced environment.
- An understanding of micro-service encapsulation and loose coupling, and why they are important.
- An understanding of how to define technical and operational metrics to measure system health and to manage risk.
- Kindness and pragmatic optimism.

Responsibilities:

- Designing, implementing, and testing solutions to various engineering problems in a high-throughput, low-latency microservices environment.
- Enhancing systems' observability with proper metrics, monitors, and alerts.
- Reading and understanding product user stories, and then translating them into actionable tasks for both frontend and backend components.
- Taking ownership of one or more of the team's domain areas.
- Understanding and using automated tools (AI) while adhering to company policy.
- Available for On-Call rotations based on the team's escalation policy and support schedule.
- Senior engineer who shapes technical direction, scales impact through others, and leads across team boundaries.

Basic Qualifications:

- BS or MS in Computer Science / Engineering or relevant work experience.
- 5+ years of software engineering experience.
- Demonstrable analytical / problem-solving skills.
- Great communication, collaboration skills, and a strong teamwork ethic with both technical and non-technical audiences.
- Experience with:
 - SpringBoot or similar web services frameworks.
 - Cloud platforms such as AWS.
 - Modern DevOps tools such as Terraform, Docker, and Kubernetes.
 - Microservice architectures
